FOOTNOTE ON ISLANDS

Given the physical and logistical problems of activating new islands in Antarctica, it has not been considered a worthwhile use of time to check and list all the possible qualifying islands in the same way as for the main continents. Any proposal for an operation from an unlisted island should be referred to IOTA Management together with a recent large scale marine map, showing in particular the location of the targeted island vis-a-vis any nearby Ice Shelf. See note on the Antarctica entry. Normal requirements for first time operations apply.
